Drug–disease candidate universe (4,477 drugs per disease)
Literal graph evidence; candidates without paths retained
Semantic expert
Qwen embeddings
Source-disease regression
Lexical expert
TF-IDF features
Source-disease regression
Knowledge expert
DeepSeek plausibility
Three verified positive supports
Within-expert percentile normalization
Preserves ranking; aligns heterogeneous score scales
Positive-rank evidence
Softmax expert weights
Fixed fusion rule
No query-label input
Weighted upper-tail fusion
Disease-specific candidate ranking
Research shortlist and evidence inspection
Held-out query labels:
evaluation only
